

Sunny Kumar

2.5 years | Python Developer

Summary

Dedicated Python backend developer with around 2.5 years of experience in designing and implementing robust and scalable applications. Proficient in working with frameworks such as Django, FastAPI, and Flask. Skilled in developing and integrating REST and GraphQL APIs. Experienced in managing relational databases like PostgreSQL, NoSQL databases like MongoDB, and in-memory databases like Redis. Adept at working with both monolithic and microservices architectures to deliver high-quality, efficient solutions. Proficient in interacting with cloud services, particularly AWS.

Professional Qualifications

Degree / Certification	University / Institute	Year of passing
B.E	University Institute of Technology, Bardhaman University	2022

Technical Skills

Languages	Python, JavaScript , C/C++
Framework	Flask, FastAPI, Django, Pytest, Celery, Kafka
Database	MySQL, MongoDB, Postgresql, Redis
Web Services	Rest API, GraphQL API, Firebase, Git, AWS S3, AWS EC2
IDE	Visual Studio Code, Visual Studio
Operating Systems	Windows 7/8/10, Ubuntu, MAC OS
Miscellaneous	Project Management, System Architecture

Project Experience

Project Name	Blockchain backed Invoice Financing project
Description:	A fintech platform designed to enhance financial ecosystems through automated, real-time risk assessments of invoices. it was used by facebook.
Responsibilities :	- Designing apis and utils required in the backend - worked on core functionality of the project - Worked on third party apis integration like codat , PPSR
Tech Stack	Django ,postgresql, Redis, Celery, Western union payment gateway, AWS, Angular
Team Size	50

Project	Bill payment microservices project
Description	A Bill payment system , that offers desired payment gateway to client.
Responsibilities	- integrated Nuvei payment gateway - integrated customised admin panel - worked on core services like transaction, auth
Team Size	15
Technical Stack	Flask, postgresql, Redis, gRPC, kafka, React

Project	Video Proctoring
Description	A Video proctoring project that will be used for exam proctoring.

	We used webRTC api to capture user stream and send it to backend .In the backend we analyse the image using aws rekognition api.
Responsibilities	Designed Backend System
Team Size	3
Technical Stack	HTML, CSS, Javascript, Django, AWS Rekognition, AWS S3

Project	Social Media App (QLAN)
Description	Social Media for Gamers, which is used for online communication, content sharing, Game data syncing from multiple games (PUBG & CSGO) with external services
Responsibilities	- Design the entire micro service architecture in flask. - worked on its core features like feed , coin, notification
Team Size	10
Technical Stack	Flask, Postgresql, Redis, Firebase, Celery, Kafka, AWS S3, MongoDB, SQLAlchemy, mongoengine
